GAC IS ON TOP AGAIN

Introducing GAC's Integral Actuator for Delphi DES Pump Family ADD103 SERIES

-  Lowest Cost Integral Actuator For The Delphi DES F.I. Pump
-  High Reliability / Proven Electromechanical Design
-  Easy Installation Requiring Minimal Time And Set-up
-  Increased Operational Integrity and Security
-  Environmentally Sealed All Metal Design
-  Fast Response < 45 msec.
-  Compatible with most GAC Speed Control Units

Governors America Corp. has introduced another innovative integral electric actuator that is specifically designed for use on Delphi DES fuel injection pumps. The ADD103 Series uses a field proven electromechanical design that is common to most GAC electric actuators. Its low L/R ratio design has fast response characteristics that enhance any engine speed control scheme. The ADD103 utilizes a metal design with a high temperature rating that insures a long life product without compromise. GAC has a complete family of speed control units, which range from simple analog systems up to sophisticated digital controls. One of them is just right for your application. For more information on how you can economically move your engine controls to top performance, contact GAC or our World Wide Network of Authorized Representatives.
